

Concrete Economics The Hamilton Approach To Economic Growth And Policy

As new federations take shape and old ones are revived around the world, a difficult challenge is to create incentives for fiscal discipline. By combining theory, quantitative analysis, and historical and contemporary case studies, this book lays out the first systematic explanation of why decentralized countries have had dramatically different fiscal experiences. It provides insights into current policy debates from Latin America to the European Union, and a new perspective on a tension between the promise and peril of federalism that has characterized the literature since *The Federalist Papers*.

The study of literature and economics is by no means a new one, but since the financial crash of 2008, the field has grown considerably with a broad range of both fiction and criticism. *The Routledge Companion to Literature and Economics* is the first authoritative guide tying together the seemingly disparate areas of literature and economics. Drawing together 38 critics, the Companion offers both an introduction and a springboard to this sometimes complex but highly relevant field. With sections on "Critical traditions," "Histories," "Principles," and "Contemporary culture," the book looks at examples from Medieval and Renaissance literature through to poetry of the Great Depression and novels depicting the 2008 financial crisis. Covering topics from Austen to austerity, Marxism to modernism, the collated essays offer indispensable analysis of the relationship between literary studies and the economy. Representing a wide spectrum of approaches, this book introduces the basics of economics, while engaging with essential theory and debate. As the reality of economic hardship and disparity is widely acknowledged and spreads across disciplines, this Companion offers students and scholars a chance to enter this crucially important interdisciplinary area.

Brilliantly written and argued, *Concrete Economics* shows exactly how the US government has shaped and directed the economy since the very inception of the country. This book does not rehash the sturdy and well-known arguments that to thrive, an entrepreneurial economy needs a social and policy environment characterized by a broad range of freedoms. Nor does it buy into the myth of the absolutely free market. Instead, Cohen and DeLong focus on the forgotten role played by the US government in initiating and enabling a redesign of the US economy. The government not only sets the ground rules for entrepreneurial activity but directs the surges of energy that mark a vibrant economy. It is as true for present-day Silicon Valley as it was for New England manufacturing at the dawn of the nineteenth century. This is not an argument based on abstract truths, complex correlations, or arcane discoveries, but rather on the facts of how the US economy succeeded so brilliantly. And that provides a blueprint for how the government, established companies, and new ventures can partner to yet again successfully reshape the economy.

The economics profession has become a favourite punching bag in the aftermath of the global financial crisis. Economists are widely reviled and their influence derided by the general public. Yet their services have never been in greater demand. To unravel the paradox, we need to understand both the strengths and weaknesses of economics. This book offers both a defence and critique of economics. Economists' way of thinking about social phenomena has great advantages. But the flexible, contextual

nature of economics is also its Achilles' heel in the hands of clumsy practitioners.

For nearly ten years, readers of the Sunday Boston Globe and newspapers around America have delighted in David Warsh's column, "Economic Principals." This collection shows why. Taken as a whole, Warsh's writings amount to a vast and colorful group portrait of the personalities who dominate modern economics -- from the luminaries to unknown soldiers to eccentrics who add sparkle to the tapestry. Partly a history of controversies in economics, partly an essay on the evolution of the field, *Economic Principals* offers a glimpse of one of the most important stories of our time: the metamorphosis of a priestly class of moral philosophers into the mathematical mandarins of today, whose ideas are reshaping society even as they reveal its workings in ever more subtle detail. Warsh first recounts the rise of the economic paradigm, deftly treating the rediscovery of Adam Smith and the centrality of markets. He then turns to the generation of economists for whom the Nobel Prize was created in 1969, the men who forged the modern field in a few years during and after World War II. Some, like Paul Samuelson and Milton Friedman, are well known to the public; others, like Trygve Haavelmo and George Dantzig, are less quickly recognized. But all have interesting stories which Warsh brings to light. Tracing the high tech revolution to the current generation, he sketches younger scholars such as Jeffrey Sachs, Martin Feldstein, and others less popularly known, who rule the field today. Marking the most powerful applications of modern economics, Warsh explains how the ingenious "rocket scientists" of Wall Street are creating new markets and the business school wizards and leading corporate executives are reinventing the organization. Finally, in exploring the implications of modern economics, Warsh introduces us to scholars operating on the boundaries of the field, from Jane Jacobs to Noam Chomsky, and to the critics, like Donald McCloskey and Robert Reich, who have brought a bit of moral philosophy back into the economist's brave new world. At every step, Warsh maps the field with the journalist's eye for detail. Readers will see why he is considered one of the most consistently stimulating economic journalists in America today.

Industrial policy is tainted with bad reputation among policymakers and academics and is often viewed as the road to perdition for developing economies. Yet the success of the Asian Miracles with industrial policy stands as an uncomfortable story that many ignore or claim it cannot be replicated. Using a theory and empirical evidence, we argue that one can learn more from miracles than failures. We suggest three key principles behind their success: (i) the support of domestic producers in sophisticated industries, beyond the initial comparative advantage; (ii) export orientation; and (iii) the pursuit of fierce competition with strict accountability.

One-in-seven adults and one-in-five children in the United States live in poverty. Individuals and families living in poverty are not only lack basic, material necessities, but they are also disproportionately afflicted by many social and economic challenges. Some of these challenges include the increased possibility of an unstable home situation, inadequate education opportunities at all levels, and a high chance of crime and victimization. Given this growing social, economic, and political concern, The Hamilton Project at Brookings asked academic experts to develop policy proposals confronting the various challenges of America's poorest citizens, and to introduce innovative approaches to addressing poverty. When combined, the scope and impact of these proposals has the

potential to vastly improve the lives of the poor. The resulting 14 policy memos are included in The Hamilton Project's Policies to Address Poverty in America. The main areas of focus include promoting early childhood development, supporting disadvantaged youth, building worker skills, and improving safety net and work support.

Concrete Economics The Hamilton Approach to Economic Growth and Policy Harvard Business School Press

Political Crises, Social Conflict and Economic Development is a rare attempt to undertake comparative political economy analysis of the Andean region and thus represents a welcome contribution. . . It is clearly written and will engage scholars interested in Latin America from a wide range of disciplines. Jonathan di John, Journal of Agrarian Change This collection of essays on the political economy of the Andean region goes to the heart of the struggle these smaller economies face in completing crucial reforms and achieving higher growth. Andrés Solimano has brought together the best and the brightest talent from each country, the result being the most compelling analysis ever of how enclave development and a historical dependence on primary exports renders these countries distinctly Andean. As the essays argue, the political solutions and economic remedies must address this phenomenon, rather than mimicking those strategies of the larger emerging market countries in the region. Carol Wise, University of Southern California, US The contributors to this authoritative volume analyze the impact of political crises and social conflict on economic performance in the Andean region of Latin America. The blend of theory and case studies is also relevant for understanding other complex societies in the developing world and transition economies. The book provides illuminating insights on how to understand, and survive, the complicated interactions between volatile politics, unstable democracies, violence, social inequality and uneven economic performance. Recent political economy theories are combined with valuable quantitative and qualitative information on presidential crises, breakdowns of democracy, constitutional reforms, quality of institutions, and social inequality and exclusion to understand actual country realities. Part I provides the conceptual framework and a regional perspective of the book. Part II contains five political economy country studies Bolivia, Colombia, Ecuador, Peru and Venezuela written by leading scholars in the field and former senior policymakers, including a former President. Together, the chapters highlight the detrimental effects of political instability and social conflict on economic growth and stability, as well as the feedback effects from poor economic performance on political instability and institutional fragility. The country studies warn that narrow economic reforms that do not pay adequate attention to politics, institutions and social structures are bound to fail in bringing lasting prosperity and stability to complex societies. Examining new and rich information on episodes of political turmoil, military interventions, forced presidential resignations, constitutional reforms and social uprisings, this book will be required reading for all those interested in the interface of politics and economic development.

Adolescence is a time when youth make decisions, both good and bad, that have consequences for the rest of their lives. Some of these decisions put them at risk of lifelong health problems, injury, or death. The Institute of Medicine held three public workshops between 2008 and 2009 to provide a venue for researchers, health care providers, and community leaders to discuss strategies to improve adolescent health.

Half of all workers are hired through personal referrals, and networks of social connections channel the flows of capital, technology, and international trade. Sociologists and economists alike recognize that economic exchange is shaped by social networks, which propagate information and facilitate trust, but each discipline brings a distinct theoretical perspective to the study of networks. Sociologists have focused on how networks shape individual behavior, economists on how individual choices shape networks. *The Missing Links* is a bold effort by an interdisciplinary group of scholars to synthesize sociological and economic theories of how economic networks emerge and evolve. Interweaving sophisticated theoretical models and concrete case studies, *The Missing Links* is both an introduction to the study of economic networks and a catalyst for further research. Economists Rachel Kranton and Deborah Minehart illustrate their field's approach to modeling network formation, showing how manufacturers form networks of suppliers in ways that maximize profits. Exemplifying the sociological approach, Ronald Burt analyzes patterns of cooperation and peer evaluations among colleagues at a financial organization. He finds that dense connections of shared acquaintances lead to more stable reputations. In the latter half of the book, contributors combine the insights of sociology and economics to explore a series of case studies. Ray Reagans, Ezra Zuckerman, and Bill McEvily investigate an R & D firm in which employees participate in overlapping collaborative teams, allowing the authors to disentangle the effects of network structure and individual human capital on team performance. Kaivan Munshi and Mark Rosenzweig examine how economic development and rising inequality in India are reshaping caste-based networks of mutual insurance and job referrals. Their study shows that people's economic decisions today are shaped both by the legacy of the caste hierarchies and by the particular incentives and constraints that each individual faces in an evolving labor market. Economic globalization is forging new connections between people in distant corners of the world, while unsettling long-standing social relations. Anyone interested in understanding the opportunities and challenges of this era of rapid change will find a highly informative guide in *The Missing Links*.

Introduction to Modern Economic Growth is a groundbreaking text from one of today's leading economists. Daron Acemoglu gives graduate students not only the tools to analyze growth and related macroeconomic problems, but also the broad perspective needed to apply those tools to the big-picture questions of growth and divergence. And he introduces the economic and mathematical foundations of modern growth theory and macroeconomics in a rigorous but easy to follow manner. After covering the necessary background on dynamic general equilibrium and dynamic optimization, the book presents the basic workhorse models of growth and takes students to the frontier areas of growth theory, including models of human capital, endogenous technological change, technology transfer, international trade, economic development, and political economy. The book integrates these theories with data and shows how theoretical approaches can lead to better perspectives on the fundamental causes of economic growth and the wealth of nations. Innovative and authoritative, this book is likely to shape how economic growth is taught and learned for years to come. Introduces all the foundations for understanding economic growth and dynamic macroeconomic analysis Focuses on the big-picture questions of economic growth Provides mathematical foundations Presents dynamic general equilibrium Covers models such as basic Solow, neoclassical growth, and overlapping generations, as well as

models of endogenous technology and international linkages Addresses frontier research areas such as international linkages, international trade, political economy, and economic development and structural change An accompanying Student Solutions Manual containing the answers to selected exercises is available (978-0-691-14163-3/\$24.95). See:

This book is a major contribution to the study of political economy. With chapters ranging from the origins of political economy to its most exciting research fields, this handbook provides a reassessment of political economy as it stands today, whilst boldly gesturing to where it might head in the future. This handbook transcends the received dichotomy between political economy as an application of rational choice theory or as the study of the causes of societies' material welfare, outlining a broader field of study that encompasses those traditions. This book will be essential reading for academics, researchers, students, and anyone looking for a comprehensive reassessment of political economy.

Industrial policy has long been regarded as a strategy to encourage sector-, industry-, or economy-wide development by the state. It has been central to competitiveness, catching up, and structural change in both advanced and developing countries. It has also been one of the most contested perspectives, reflecting ideologically inflected debates and shifts in prevailing ideas. There has lately been a renewed interest in industrial policy in academic circles and international policy dialogues, prompted by the weak outcomes of policies pursued by many developing countries under the direction of the Washington Consensus (and its descendants), the slow economic recovery of many advanced economies after the 2008 global financial crisis, and mounting anxieties about the national consequences of globalization. The Oxford Handbook of Industrial Policy presents a comprehensive review of and a novel approach to the conceptual and theoretical foundations of industrial policy. The Handbook also presents analytical perspectives on how industrial policy connects to broader issues of development strategy, macro-economic policies, infrastructure development, human capital, and political economy. By combining historical and theoretical perspectives, and integrating conceptual issues with empirical evidence drawn from advanced, emerging, and developing countries, The Handbook offers valuable lessons and policy insights to policymakers, practitioners and researchers on developing productive transformation, technological capabilities, and international competitiveness. It addresses pressing issues including climate change, the gendered dimensions of industrial policy, global governance, and technical change. Written by leading international thinkers on the subject, the volume pulls together different perspectives and schools of thought from neo-classical to structuralist development economists to discuss and highlight the adaptation of industrial policy in an ever-changing socio-economic and political landscape.

INTERNATIONAL BESTSELLER "For anyone who wants to understand capitalism not as economists or politicians have pictured it but as it actually operates, this book will be invaluable."-Observer (UK) If you've wondered how we did not see the economic collapse coming, Ha-Joon Chang knows the answer: We didn't ask what they didn't tell us about capitalism. This is a lighthearted book with a serious purpose: to question the assumptions behind the dogma and sheer hype that the dominant school of

neoliberal economists—the apostles of the freemarket—have spun since the Age of Reagan. Chang, the author of the international bestseller *Bad Samaritans*, is one of the world's most respected economists, a voice of sanity—and wit—in the tradition of John Kenneth Galbraith and Joseph Stiglitz. *23 Things They Don't Tell You About Capitalism* equips readers with an understanding of how global capitalism works—and doesn't. In his final chapter, "How to Rebuild the World," Chang offers a vision of how we can shape capitalism to humane ends, instead of becoming slaves of the market.

Argues that public finance—the study of the government's role in economics—should incorporate principles from behavior economics and other branches of psychology.

Graph-structured data is ubiquitous throughout the natural and social sciences, from telecommunication networks to quantum chemistry. Building relational inductive biases into deep learning architectures is crucial for creating systems that can learn, reason, and generalize from this kind of data. Recent years have seen a surge in research on graph representation learning, including techniques for deep graph embeddings, generalizations of convolutional neural networks to graph-structured data, and neural message-passing approaches inspired by belief propagation. These advances in graph representation learning have led to new state-of-the-art results in numerous domains, including chemical synthesis, 3D vision, recommender systems, question answering, and social network analysis. This book provides a synthesis and overview of graph representation learning. It begins with a discussion of the goals of graph representation learning as well as key methodological foundations in graph theory and network analysis. Following this, the book introduces and reviews methods for learning node embeddings, including random-walk-based methods and applications to knowledge graphs. It then provides a technical synthesis and introduction to the highly successful graph neural network (GNN) formalism, which has become a dominant and fast-growing paradigm for deep learning with graph data. The book concludes with a synthesis of recent advancements in deep generative models for graphs—a nascent but quickly growing subset of graph representation learning.

This book will help readers take the steps needed to set their museums on a path to being welcoming and accessible. It features a variety of actions that museums, regardless of their size or budget, can implement.

Grasp the history, principles, theories, and terminology of economics with this updated bestseller Since the initial publication of *Economics For Dummies* in 2005, the U.S. has endured a number of drastic changes and events that sent its economy into a tailspin. This newly revised edition presents updated material about the recent financial crisis and the steps taken to repair it. Packed with refreshed information and relevant new examples from today's economy, it gives you a straightforward, easy-to-grasp understanding of how the economy functions—and how it influences personal finances. New information on deciphering consumer behavior Refresh coverage of fiscal and monetary policies A new chapter on health care policy and the financial crisis Presenting complex theories in simple terms and helping you decode the jargon, understand the equations, and debunk the common misconceptions, *Economics For Dummies* tackles the topic in

terms you can understand.

Debunks the pervasive and self-congratulatory myth that our country is proudly founded by and for immigrants, and urges readers to embrace a more complex and honest history of the United States. Whether in political debates or discussions about immigration around the kitchen table, many Americans, regardless of party affiliation, will say proudly that we are a nation of immigrants. In this bold new book, historian Roxanne Dunbar-Ortiz asserts this ideology is harmful and dishonest because it serves to mask and diminish the US's history of settler colonialism, genocide, white supremacy, slavery, and structural inequality, all of which we still grapple with today. She explains that the idea that we are living in a land of opportunity—founded and built by immigrants—was a convenient response by the ruling class and its brain trust to the 1960s demands for decolonialization, justice, reparations, and social equality. Moreover, Dunbar-Ortiz charges that this feel good—but inaccurate—story promotes a benign narrative of progress, obscuring that the country was founded in violence as a settler state, and imperialist since its inception. While some of us are immigrants or descendants of immigrants, others are descendants of white settlers who arrived as colonizers to displace those who were here since time immemorial, and still others are descendants of those who were kidnapped and forced here against their will. This paradigm shifting new book from the highly acclaimed author of *An Indigenous Peoples' History of the United States* charges that we need to stop believing and perpetuating this simplistic and a historical idea and embrace the real (and often horrific) history of the United States.

Is regarded as the most important response to the philosophies of desire, as expounded by thinkers such as de Sade, Nietzsche, Bataille, Foucault and Deleuze and Guattari. It is a major work not only of philosophy, but of sexual politics, semiotics and literary theory, that signals the passage to postmodern philosophy.

How do we create employment, grow businesses, and build greater economic resilience in our low-income communities? How do we create economic development for everyone, everywhere – including rural towns, inner-city neighborhoods, aging suburbs, and regions such as Appalachia, American Indian reservations, the Mexican border, and the Mississippi Delta – and not just in elite communities? *Economic Development for Everyone* collects, organizes, and reviews much of the current research available on creating economic development in low-income communities. Part I offers an overview of the harsh realities facing low-income communities in the US today; their many economic and social challenges; debates on whether to try reviving local economies vs. relocating residents; and current trends in economic development that emphasize high-tech industry and high levels of human capital. Part II organizes the sprawling literature of applied economic development research into a practical framework of five dynamic dimensions: empower your residents: begin with basic education; enhance your community: build on existing assets; encourage your entrepreneurs; diversify your

economy; and sustain your development. This book, assembled and presented in a unified framework, will be invaluable for students and new researchers of economic development in low-income communities, and will offer new perspectives for established researchers, professional economic developers and planners, and public officials. Development practitioners and community leaders will also find new ideas and opportunities, along with a broad view on how the many complex parts of economic development interconnect.

“an excellent new book” — Paul Krugman, *The New York Times* History, not ideology, holds the key to growth. Brilliantly written and argued, *Concrete Economics* shows how government has repeatedly reshaped the American economy ever since Alexander Hamilton’s first, foundational redesign. This book does not rehash the sturdy and long-accepted arguments that to thrive, entrepreneurial economies need a broad range of freedoms. Instead, Steve Cohen and Brad DeLong remedy our national amnesia about how our economy has actually grown and the role government has played in redesigning and reinvigorating it throughout our history. The government not only sets the ground rules for entrepreneurial activity but directs the surges of energy that mark a vibrant economy. This is as true for present-day Silicon Valley as it was for New England manufacturing at the dawn of the nineteenth century. The authors’ argument is not one based on abstract ideas, arcane discoveries, or complex correlations. Instead it is based on the facts—facts that were once well known but that have been obscured in a fog of ideology—of how the US economy benefited from a pragmatic government approach to succeed so brilliantly. Understanding how our economy has grown in the past provides a blueprint for how we might again redesign and reinvigorate it today, for such a redesign is sorely needed. How much further should the affluent world push its material consumption? Does relative dematerialization lead to absolute decline in demand for materials? These and many other questions are discussed and answered in *Making the Modern World: Materials and Dematerialization*. Over the course of time, the modern world has become dependent on unprecedented flows of materials. Now even the most efficient production processes and the highest practical rates of recycling may not be enough to result in dematerialization rates that would be high enough to negate the rising demand for materials generated by continuing population growth and rising standards of living. This book explores the costs of this dependence and the potential for substantial dematerialization of modern economies. *Making the Modern World: Materials and Dematerialization* considers the principal materials used throughout history, from wood and stone, through to metals, alloys, plastics and silicon, describing their extraction and production.

For most Western audiences, Cuba is a touristic paradise stuck in time and virtually detached from world technology networks by the US embargo – anything but a hub of industrial innovation and high value-added biotechnology. However, a closer look reveals more subtle but equally powerful stories that challenge the homogenizing assumptions of

conventional economics and open up scope for more sophisticated reflections on Cuban economy and industry. From this kind of enquiry emerges the case of the internationally respected Cuban biotech industry as the most successful case of science and technology policy in the country's economic history. The book takes an interdisciplinary approach, exploring issues such as interdependency, purpose and history as natural constituencies of the innovation process. It also examines the dynamic and crucial role played by the state in the formation of innovative business enterprises. This book will be of interest to academic researchers in the fields of innovation and economic development.

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

Global Economics: A Holistic Approach integrates real world examples and case studies with economic analysis to examine the emerging global economy. It covers topics not typically considered by international economics, such as migration, in addition to taking a fresh approach to traditional topics.

WINNER OF THE LIONEL GELBER PRIZE A NEW YORK TIMES NOTABLE BOOK OF 2018 ONE OF THE ECONOMIST'S BOOKS OF THE YEAR A NEW YORK TIMES CRITICS' TOP BOOK "An intelligent explanation of the mechanisms that produced the crisis and the response to it...One of the great strengths of Tooze's book is to demonstrate the deeply intertwined nature of the European and American financial systems."--The New York Times Book Review From the prizewinning economic historian and author of *Shutdown* and *The Deluge*, an eye-opening reinterpretation of the 2008 economic crisis (and its ten-year aftermath) as a global event that directly led to the shockwaves being felt around the world today. We live in a world where dramatic shifts in the domestic and global economy command the headlines, from rollbacks in US banking regulations to tariffs that may ignite international trade wars. But current events have deep roots, and the key to navigating today's roiling policies lies in the events that started it all—the 2008 economic crisis and its aftermath. Despite initial attempts to downplay the crisis as a local incident, what happened on Wall Street beginning in 2008 was, in fact, a dramatic caesura of global significance that spiraled around the world, from the financial markets of the UK and Europe to the factories and dockyards of Asia, the Middle East, and Latin America, forcing a rearrangement of global governance. With a historian's eye for detail, connection, and consequence, Adam Tooze brings the story right up to today's negotiations, actions, and threats—a much-needed perspective on a global catastrophe and its long-term consequences.

"An entertaining look at the life and wisdom of Alexander Hamilton, the Founding Father who mastered the arts of wit, war, and wealth, long before becoming the subject of the runaway Broadway hit *Hamilton: An American Musical*,"--Amazon.com.

This book provides the most comprehensive treatment to date of microeconometrics, the analysis of individual-level data on the

economic behavior of individuals or firms using regression methods for cross section and panel data. The book is oriented to the practitioner. A basic understanding of the linear regression model with matrix algebra is assumed. The text can be used for a microeconometrics course, typically a second-year economics PhD course; for data-oriented applied microeconometrics field courses; and as a reference work for graduate students and applied researchers who wish to fill in gaps in their toolkit.

Distinguishing features of the book include emphasis on nonlinear models and robust inference, simulation-based estimation, and problems of complex survey data. The book makes frequent use of numerical examples based on generated data to illustrate the key models and methods. More substantially, it systematically integrates into the text empirical illustrations based on seven large and exceptionally rich data sets.

"A manifesto for our times." —Thomas Frank, Wall Street Journal
Barry C. Lynn, one of the most original and surprising students of the American economy, paints a genuinely alarming picture: most of our public debates about globalization, competitiveness, creative destruction, and risky finance are nothing more than a cover for the widespread consolidation of power in nearly every imaginable sector of the American economy. Cornered strips the camouflage from the secret world of twenty-first-century monopolies-neofeudalist empires whose sheer size, vast resources, and immense political power enable the people who control to direct virtually every major industry in America in an increasingly authoritarian manner. Lynn reveals how these massive juggernauts, which would have been illegal just thirty years ago, came into being, how they have destroyed or devoured their competition, and how they collude with one another to maintain their power and create the illusion of open, competitive markets. A confluence of small government zealotry and misguided efficient market theories has led to a complete dismantling of government oversight of industry. Has that brought us the promised economic utopia? Just the opposite. For decades, the dominant elite has used the federal government to all but encourage companies to buy one another up, outsource all their production, and make their profits by leveraging their complete power over the market itself. Lynn makes clear it will take more than a lawsuit or two to overthrow America's corporatist oligarchy and restore a model of capitalism that protects our rights as property holders and citizens, and the independence of our Republic. Details how regular citizens can join together to beat the great powers, and how to do so by relearning the real history and language of our democratic republic. Includes stories of real people and real industries that show how monopolies threaten independent businesses, squelch innovation, degrade the quality and safety of products, destabilize vital industrial and financial systems, and destroy the fabric of democracy Explores monopoly power across a wide array of industries, including appliances, auto parts, beer, eyeglasses, medical supplies, pet food, surfboards, vitamins, and more. Demonstrates how the drive for "always lower prices" makes your job disappear, puts your small business out of business, and turns dreams of entrepreneurial success into impossible fantasies Lynn is that rarest of creatures, a journalist whose theoretical writings are taken very seriously by the top policymakers and economic thinkers in Washington and around the world. His work has been compared already to John Kenneth Galbraith and Peter Drucker. The Washington Post called Lynn's last book-on globalization-"Tom Friedman for grownups." Cornered is essential reading for anyone who cares about America and its

future.

In *Can Japan Compete?*, world-renowned competition strategist Michael Porter and his colleagues explain why American assumptions about Japan have proved so inaccurate, what Japan must do to regain its strength, and what its journey can tell us about how to succeed in the new global economy. The research behind this book began in the early 1990s, at a time when Japan's economic success was overwhelmingly credited to the Japanese government and its unique management policies. Porter and his colleagues started by asking a crucial but previously overlooked question: If Japanese government policies and practices accounted for the nation's extraordinary competitiveness, then why wasn't Japan competitive in many of the industries where those policies had been prominently implemented? The authors and a team of colleagues surveyed a vast array of Japanese industries. This surprising book is the result of their work. The continuing influence of Japanese government and management strategies worldwide makes *Can Japan Compete?* a must read for anyone competing in the global economy.

At the end of World War II, the United States had all the money—and all the power. Now, America finds itself cash poor, and to a great extent power follows money. In *The End of Influence*, renowned economic analysts Stephen S. Cohen and J. Bradford DeLong explore the grave consequences this loss will have for America's place in the world. America, Cohen and DeLong argue, will no longer be the world's hyperpower. It will no longer wield soft cultural power or dictate a monolithic foreign policy. More damaging, though, is the blow to the world's ability to innovate economically, financially, and politically. Cohen and DeLong also explore America's complicated relationship with China, the misunderstood role of sovereign wealth funds, and the return of state-led capitalism. An essential read for anyone interested in how global economics and finance interact with national policy, *The End of Influence* explains the far-reaching and potentially long-lasting but little-noted consequences of our great fiscal crisis.

The objective of this book is to construct an individually emancipatory economic and political philosophy. This means a concrete-based, man-centered, non-hypostatizing, anti-dialectical approach to the apprehension of the material, i.e. nature in general. This constitutes an emancipation from culture-based understandings of reality, and in particular from the metaphysically biased type of culture represented by capitalism. The proposed philosophical emancipation means individual liberation from the logically flawed, massifying character of the dominant mode of thought of capitalist times. From these bases, the social sciences can also be reformulated. Micocci argues that capitalism can be conceptualized as a limited and limiting socialized mode of thought, an intellectuality whose dialectical features are effectively identified by using the proxy of political economy, both marxist and mainstream. Political economy in fact, being a most representative instance of dialectical thinking, mirrors the dialectical nature of capitalist economic and political relationships. According to Micocci, non-dialectical occurrences in capitalism are simply excluded from normal social, economic, and intellectual activities, which are performed in a metaphysical, intellectually isolated environment. In capitalism, therefore, the materials, the concrete, i.e. nature itself, is not considered as a whole but only as occasional instances. Micocci describes capitalism, in sum, as an intellectually constructed culture (a metaphysics) which preserves itself, and props itself up, by means of its iterative (market-like) functioning.

In this eye-opening work of economic theory, Jane Jacobs argues that it is cities—not nations—that are the drivers of wealth. Challenging centuries of economic orthodoxy, in *Cities and the Wealth of Nations* the beloved author contends that healthy cities are constantly evolving to replace imported goods with locally-produced alternatives, spurring a cycle of vibrant economic growth. Intelligently argued and drawing on examples from around the world and across the ages, here Jacobs radically changes the way we view our cities—and our entire economy.

Is neoclassical economics dead? Why have the biggest industrial economies stagnated since the financial crisis? Is the competitive threat from China a tired metaphor or a genuine danger to our standard of living? Lord David Sainsbury draws on his experience in business and government to assemble the evidence and comes to some startling conclusions. In *Windows of Opportunity*, he argues that economic growth comes not as a steady process, but as a series of jumps, based on investment in high value-added firms. Because these firms are engaged in winner-takes-all competition, rapid growth in one country can indeed come at the expense of growth in another, contrary to the standard models. He suggests a new theory of growth and development, with a role for government in 'picking winners' at the level of technologies and industries rather than individual firms. With the role of industrial policy at the centre of the Brexit debate, but a significant intellectual gap in setting out what that policy should be, this book could not be more timely.

Betterness: Economics for Humans is a powerful call to arms for a post-capitalist economy. Umair Haque argues that just as positive psychology revolutionized our understanding of mental health by recasting the field as more than just treating mental illness, we need to rethink our economic paradigm. Why? Because business as we know it has reached a state of diminishing returns—though we work harder and harder, we never seem to get anywhere. This has led to a diminishing of the common wealth: wage stagnation, widening economic inequality, the depletion of the natural world, and more. To get out of this trap, we need to rethink the future of human exchange. In short, we need to get out of business and into betterness. HBR Singles provide brief yet potent business ideas, in digital form, for today's thinking professional.

Providing an insider view on how to tackle the very unique challenges of the Indian market, the former India head of two U.S. multinational corporations proves that if you can make it in India, you can make it anywhere by revealing how to break into through successfully. 10,000 first printing.

Regulation Theory and Australian Capitalism offers an understanding of how and why Australian labour law has changed, along with the impact on key social justice issues. More broadly, it uses theoretical models to assess labour law regimes within capitalist societies.

With over a million copies sold, *Economics in One Lesson* is an essential guide to the basics of economic theory. A fundamental influence on modern libertarianism, Hazlitt defends capitalism and the free market from economic myths that persist to this day. Considered among the leading economic thinkers of the "Austrian School," which includes Carl Menger, Ludwig von Mises, Friedrich (F.A.) Hayek, and others, Henry Hazlitt (1894-1993), was a libertarian philosopher, an economist, and a journalist. He

was the founding vice-president of the Foundation for Economic Education and an early editor of The Freeman magazine, an influential libertarian publication. Hazlitt wrote Economics in One Lesson, his seminal work, in 1946. Concise and instructive, it is also deceptively prescient and far-reaching in its efforts to dissemble economic fallacies that are so prevalent they have almost become a new orthodoxy. Economic commentators across the political spectrum have credited Hazlitt with foreseeing the collapse of the global economy which occurred more than 50 years after the initial publication of Economics in One Lesson. Hazlitt's focus on non-governmental solutions, strong — and strongly reasoned — anti-deficit position, and general emphasis on free markets, economic liberty of individuals, and the dangers of government intervention make Economics in One Lesson every bit as relevant and valuable today as it has been since publication.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways.

Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
