The need for informed analyses of health policy is now greater than ever. Integrating perspectives from the humanities, social sciences, medicine, and public health, this volume illuminates the relationships between justice and health inequalities to enrich debates. *Understanding Health Inequalities and Justice* explores three questions: How do scholars approach relations between health inequalities and ideals of justice? When do justice considerations inform solutions to health inequalities, and how do specific health inequalities affect perceptions of injustice? And how can diverse scholarly approaches contribute to better health policy? From addressing patient agency in an inequitable health care environment to examining how scholars of social justice and health care amass evidence, this volume promotes a richer understanding of health and justice and how to achieve both. The purpose of this research study was to identify the strengths and limitations of the current Minnesota collaborative agreement (Statute 150A.10 subd. 1a "Limited Authorization for Dental Hygienists") in addressing the oral health needs of unserved and underserved Minnesotans. Through the identification of needs and gaps in the collaborative agreement infrastructure, this research can inform and provide suggested guidelines for quality measures and policy recommendations. Data for this qualitative research study was collected by interviewing eight Collaborative Practice Dental Hygienists and nine Collaborative Dental Hygiene Practice Advisory Committee Members. An in-depth interview guide, containing 17 interview questions, was utilized for both groups of participants to identify strengths, limitations, and possible changes that need to be made to the collaborative agreement statute and /or direct access infrastructure in Minnesota. The research found that there are many benefits to practicing with a collaborative agreement, such as providing opportunities for underserved populations and the dental hygiene profession. However, many barriers were identified that impede the potential opportunities, namely lack of awareness and education regarding collaborative practice among the dental profession, difficulty finding dentists to sign a collaborative agreement, and few referral sources. Many potential changes to the statute and collaborative agreement infrastructure were identified and presented as a means to improve

the oral health of unserved and underserved Minnesotans.
