

safety programs, regulatory organizations, ground operations safety, gap analysis, ethics, and safety management systems, the book provides a theoretical background to safety issues, while making a significant connection to how the information can be directly applied to the aviation industry. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The construction industry has a distressingly poor safety record, whether measured in absolute terms or alongside other industries. The level of construction safety in a country is influenced by factors such as variations in the labour forces, shifting economies, insurance rates, legal ramifications and the stage of technological development. Yet the problem is a world-wide one, and many of the ways of tackling it can be applied across countries. Effective tools include designing, preplanning, training, management commitment and the development of a safety culture. The introduction and operation of effective safety management systems represents a viable way forwards, but these systems are all too rarely implemented. How can this be done? Should we go back to prescriptive legislation? This book considers these questions by drawing together leading-edge research papers from the proceedings of an international conference conducted by a commission (W099) on Safety and Health on Construction Sites of CIB, the international council of building research organisations.

Health and the Modern Home explores shifting and contentious debates about the impact of the domestic environment on health in the modern period. Drawing on recent scholarship, contributors expose the socio-political context in which the physical and emotional environment of "the modern home" and "family" became implicated in the maintenance of health and in the aetiology and pathogenesis of diverse psychological and physical conditions. In addition, they critically analyze the manner in which the expression and articulation of medical concerns about the domestic environment served to legitimate particular political and ideological positions.

Limiting Harm in Health Care highlights the potential for unnecessary harm in health care practice. This harm is mostly unintentional, but it can result from many different aspects of medical treatment in a wide range of practice areas. Adverse events, events or omissions during clinical care resulting in physical or psychological injury, are increasingly being recognised as significant problems in health care. Following clarification of the nature and extent of medical harm in health care, separate chapters explore the potential for medical harm in diverse areas of practice. Topics include problems in the use of medication, the treatment of acute heart disease, the role of hospital routine and the potentially negative role of medically dominated treatment in mental illness and palliative care. The book includes recommendations for reducing unnecessary harm within the expanding boundaries of nursing practice. The reader is challenged to assess the potential risks inherent in the health care system, to reconsider established methods of treatment, and to re-examine professional working relationships.

"This book offers state-of-the-art information and references for work undertaken in the challenging area of utilizing cutting-edge distributed and collaborative ICT to advance disaster management as a discipline to cope with current and future unforeseen threats"--Provided by publisher.

First multi-year cumulation covers six years: 1965-70.

An Ounce of Prevention is a comprehensive and practical guide to the process of disaster planning. This completely revised and expanded publication builds on the strengths of its award-winning predecessor. Used as a planning tool, it will help you develop strategies for effective disaster prevention and recovery.

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports (STAR) and International aerospace abstracts (IAA)
